---

Dear Sir or Madam,

I am a recent Magna Cum Laude graduate of Ferris State University where I earned a B.S. Manufacturing Engineering Technology and C.T. Quality Technology. I graduated first in my class and was voted by my peers as Most Outstanding Student and Most Likely to Succeed. I have earned similar praise from my professors as well as my Society of Manufacturing Engineers chapter, of which I was Vice President.

As an engineering student, I have studied design of experiments, continuous improvement, lean manufacturing, statistical process control, FMEA, root cause analysis, and much more. As well, I have put much of that knowledge to use during a summer internship in the Engineering and Quality departments at PPG AutoGlass, Ewart, MI (now PGW) where I was involved in preparing 8D forms, root cause analysis, design of experiments, and working with maintenance personnel and contractors to perform process upgrades and repairs to glass processing equipment. In high school, I also gained much production experience during a co-op with General Motors Powertrain, Bay City, MI.

I am a hard working individual who sticks with projects until they are completed, a team player, and a fast learner. I am available immediately for employment and happy to relocate as needed.

I look forward to hearing back from you soon to set up an interview and further discuss my accomplishments and what I can do for your organization.

Sincerely,

Nicholas Yax
